

Maxava HA™ ENTERPRISE+

Maxava HA Enterprise+ offers comprehensive High Availability and Disaster Recovery readiness for an IBM i application. Designed for complex environments and organizations serious about their business continuity.

Real-time data replication and unlimited concurrent apply processes means no backlog of changes in a disaster and the ability to do a recovery in minutes.

Advanced features provide enhanced control and visibility over your environment – wherever you are.

- **Remote role swap capability** – The new maxView Manager tool enables remote monitoring, management and the ability to perform a role swap on command from a mobile device by utilizing our powerful and proprietary Command Scripting functionality remotely. So in the event of a failure, activating a switch to the back-up server is within your control.
- **Replication across QDLS**, data, objects, IFS, and MQ Series.
- **Command Scripting Function** – This flexible, smart and simple free format command scripting tool supports all native IBM i commands. Object list sets can be defined and run from a single command - no compiling required. So whether for a migration, one-off event, application specific, role swap or other activities, the scripting function provides simple management with logging and error handling capabilities.
- **Easy administration** of the HA solution from a green screen, superior GUI or from a remote web ready device such as a PC or smartphone.

Remote mobile management with maxView Manager

maxView Manager gives you control, enabling you to manage your Maxava HA Enterprise+ environment, as well as certain IBM i components. This can be done any time, anywhere with remote monitoring capability.

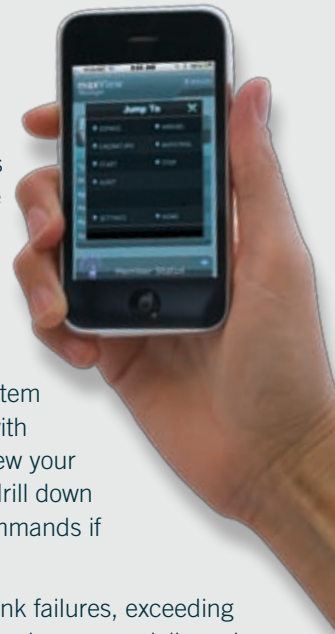

Real-Time HA HEALTH-CHECK™ included

maxView Manager makes real-time system information available remotely. Along with system information, you can quickly view your Maxava HA Enterprise+ environment, drill down to more detail and issue necessary commands if required.

Information such as communications link failures, exceeding disk utilization thresholds and replication issues are delivered immediately to your mobile device. The interactive feature allows certain actions and requests to be sent back to the system. With the intuitive maxView Manager interface you'll see a visual alert of system status and Maxava HA Enterprise+ environment, and be able to take action immediately.

Runs on your Mobile Device & Browser

maxView Manager is browser-based technology that has initially been optimized for Apple Safari on the iPhone™ and iPad, Google Chrome on the PC plus various Android and Blackberry devices. maxView Manager also comes with a PC Widget which runs on the desktop toolbar and allows access to the visual monitor for real-time alert notification.

FREE demo of maxView Manager is available on our website. www.maxava.com/products/monitoring-tools

The Maxava High Availability Suite for IBM i provides real time replication and disaster recovery measured in minutes. When it matters, choose Maxava.
