

INTELLIGENT MONITORING SOLUTION FOR IBM i, AIX, LINUX & WINDOWS MAXAVA MONITOR Mi8

Introducing Maxava Monitor Mi8, your Intelligent Monitoring Solution

Monitoring is not just a technical exercise – monitoring has bottom line benefits for almost every company.

- Business continuity that improves revenue and profits.
- Better end-user satisfaction and experiences, which delivers higher employee productivity.
- Right-sized support and operational resourcing for the demands on your mission critical systems.
- Frees up time and capacity for continuous improvement by your IT specialists.
- Improves the information available for operational decisions.
- Creates faster responses from your IT specialists during incidents.

Maxava Monitor Mi8 has been designed from the ground up to deliver the very latest monitoring capabilities for IBM i, AIX, Linux, and Windows. Maxava Monitor Mi8's rapid deployment and flexible monthly subscription payment terms deliver immediate visibility, improving the overall availability of your environment.

Maximize Your System's Availability with Maxava Monitor Mi8

Total Visibility

See all your critical server, application and availability notifications on a single pane of glass, no matter where those workloads are processed: in the cloud, at a co-location or on-premise.

Rapid Resolution

Be informed in real-time as issues arise so you can identify the root cause of the problem and rapidly resolve it.

Intelligent Monitoring

Flexible, tailored monitoring across disparate platforms, designed to meet specific system and application requirements.

Right Information to the Right People

Maxava Monitor Mi8 can enable you or your partners to seamlessly manage your application, operating system, and hardware related resources and messages.

Make Better Decisions

Take advantage of performance and availability data to make informed decisions to right-size the support required for your IT infrastructure.

Maxava Monitor Mi8 For Your Intelligent Monitoring Experience

- **Available Everywhere** - Mi8 makes it easy to monitor IBM i, AIX, Linux, and Windows applications and systems even when on the go. Its web-based interface enables secure access is available via a browser – from desktop, tablet, or mobile phone.
- **Set and Forget** – Automate your standard monitoring process with out-of-the-box monitoring rules and alerts for common tasks.
- **Control Your User Experience** – Only see those servers, resources, data, alerts, and events relevant to your needs. Cut through the clutter to focus on the critical events, while retaining access to all the detail you might need in the future.
- **Monitor the Full Stack** – Monitor your operating system, hardware, applications, and the performance of your computing resources.
- **Multi-Platform Support** – Deploy Maxava Monitor Mi8 across IBM i, AIX, Linux and Windows, and have a single view of all your computing resources.
- **Supporting Architectural Changes** – You no longer need specialized tools to manage across your different deployment architectures. Maxava Monitor Mi8 supports private, public, and hybrid cloud models out of the box. Its agents natively support your current architecture model to empower you, or your service provider, to monitor your workloads. Expect Mi8 to seamlessly evolve as your architecture changes.
- **Distribute Support Workload** – Direct alerts and information to the right people, when and where you require, by utilizing the distribution and escalation capabilities.

Systems Specification

Agent Types	IBM i, AIX, Linux and Windows
Interface	Chrome
	Firefox
	Safari
Event Types for IBM i	Maxava HA, remote journaling, ASP utilization, subsystem activity, disk utilization, memory pools, message queue monitoring, object existence check, jobs running, job queues, output queues, printer definitions, QHST, audit journals, security events, spooled files, CPU
Event Types for AIX	CPU, disk usage, memory, processes, log files, Errpt
Event Types for Linux	CPU, disk usage, memory, processes, log files
Event Types for Windows	CPU, disk usage, memory, processes, network
Event Notifications	Email, SMS, text to speech
Event escalation	User-defined thresholds and escalation paths
Rules Features	Select parameters
	Time and data triggers
	Re-useable rule templates
